

Ss Peter & Paul School

Our Mission:

• enriching education

- *Whaia te Matauranga hiranga ake*

• enthusiastic children

- *Akiaki Tamariki ngakau koropupū*

• Catholic values

- *Whaitikanga katorika*

SCIENCE

Students explore how both the natural physical world and science itself work so that they can participate as critical, informed and responsible citizens in a society in which science plays a significant role.

LIVING WORLD

- All groups of living things have life processes, common and unique requirements and adapt to and interact with their environment

PHYSICAL WORLD

- A variety of physical phenomena can be explained using the concept of energy

We provide opportunities within the **Science** programme for students to develop an understanding of the physical and biological world around them as they learn to think and behave like scientists

PLANET EARTH AND BEYOND

- The natural processes on earth, the solar system and the interdependence of land, air, water and life.

MATERIAL WORLD

- Materials can be grouped based on their properties and can be changed in permanent and temporary ways
